

NeuroSense AI - Batch Summary

NeuroSense AI - Voice Analysis Batch Summary

Batch date: July 2, 2026

Source for

Executive summary

All 9 recordings were processed successfully. Most sessions scored 65/75 (behavioral/stress) with Good algorithmic status. One outlier - DW 5-18-26 - scored 52/90, the only session with stress at 90 and behavioral below 55. Claude flagged 8 of 9 sessions as Needs Attention; AO 4-15-26 was the sole Good classification.

Recordings are long-form (~10-14 minutes each, 8 kHz telephony quality), not short check-in clips.

DW outlier highlight

DW 5-18-26 3.28PM - 010.mp3 is the only file with materially different metrics:

- Stress +11.2 above DW average (90 vs 78.8)

- Behavioral

Claude one-liner: "Not clearly pathological but not within a healthy high-function range - the 52/100 composite score is the primary flag."

Technical notes

- Claude model updated to `claude-sonnet-4-6` (previous model retired June 2026)

- Sessions
